Self-Introduction – Experienced Candidates

Hi this is Mohammed Tanveer Ahmed working as a DevOps Engineer for Capgemini company for the last 2 Years.
Currently, I have been working for HSBC Bank client where our team is managing 2 applications.
As a DevOps engineer, I make sure the environment is clean and running.

I have worked on various DevOps Tools like Git, GitHub, Jenkins, Maven, Ansible, Docker, Terraform, and Kubernetes for orchestration, AWS Cloud, and physical Data Centers.
In AWS, I have worked on various services like EC2, S3, Route 53, Application Load Balancer, VPC, CloudWatch, CloudTrail, ECS, ECR, and EKS (Elastic Kubernetes Service).
I am also focused on automation and continuous improvement, which helps in reducing manual effort and improving efficiency.

Roles and Responsibilities:

• Worked along with development teams for the next releases, where our team is responsible for UAT and PROD releases.
• Handled weekly releases and flex releases which happen every 2 or 3 months.
• Worked on monitoring alerts and troubleshooting issues.
• Managed Jenkins pipelines and infrastructure.
• Involved in patching activities along with the Linux team every quarter (pre-patching and post-patching).
• Provided 24/7 support (PagerDuty) for high-priority incidents.
• Contributed to process automation and ensured smooth deployments across environments.
